

The Arkè OAK 30.XTRA

The Oak 30.Xtra is an adjustable premier series space-savings staircase kit with an “alternating tread” design for maximum space utilization, without compromising functionality.

The horizontal balusters and railing design of the handrail system is included in the standard kit for one side of the staircase.

An optional second-side handrail kit is available for purchase separately.

The horizontal baluster and railing is visually unique when compared to the traditional vertical baluster design of most stairs.

The staircase can be easily installed by the homeowner in a single day using common household tools.

The Oak 30.Xtra is available in a choice of 2 colors hi-gloss black or white.

- ◆ Interior installation only
- Standard kit includes 11 oak wood “alternating treads”
- ◆ Height range adjustable from 90 15/16 in. to 110 1/4 in. and with additional components from a minimum of 83 7/16 in. to maximum height of 128 3/4 in.
- Can be installed in a straight line design or curved, up to 180 degrees turn, in either a clockwise or counterclockwise turn
- ◆ Rise between stair treads is adjustable from 7 15/32 in. to 9 1/4 in.
- ◆ Solid Oak wood with a natural stain and a polyurethane protective coating
- ◆ Matching Balcony rail kits are available
- ◆ Handrail consists of an aluminum core surrounded by a soft PVC cover. This allows the handrail to be curved
- ◆ A complete installation guide is included in all kits and an installation video is available upon request
- ◆ Homeowner should consult with local building department concerning building codes prior to purchase
